Project Finance For Construction And Infrastructure: Principles And Case Studies

Synopsis

This is a self-contained text on the logic and institutions of project finance, supplemented by a series of project finance case studies illustrating applications in different economic environments, across different jurisdictions and at different stages of development. It will introduce an analytical framework drawing on applied institutional economics that includes and concentrates primarily on an analysis of the institutional logic behind generic project finance arrangements. The application of the institutional framework will be demonstrated with project cases from Hong Kong, Thailand, India, Europe and Azerbaijan - each at different stages of development. While each project case will have a general theme and will highlight aspects of interest to built environment professionals, it will primarily be used to illustrate one or more specific PF/PFI principle.

Customer Reviews

"An interesting publication with many key aims, it looks to supply the concepts of project finance to academics and students by the utilisation of real projects." Building Engineer

"An interesting publication with many key aims, it looks to supply the concepts of project finance to academics and students by the utilisation of real projects." Building Engineer --This text refers to the Unknown Binding edition.

This is a great introductory book for project finance. Highly practical, it illustrates the step-by-step of

the project financing process with clear examples, spreadsheets (instead of formulae like more academic financial engineering books) and case studies. Great overall perspective - Note that basic financial knowledge is required (i.e. WACC, debt types, financial statement, etc.).
