This is another in a well-written, informative series of children's books. In addition to general information about earthquakes and how they have affected human history, there are good sections on the 2004 earthquake-caused tsunami in Southeast Asia and the 2011 9.0-magnitude quake that resulted in such horrific damage in Japan. I was interested to read of the very early, but surprisingly accurate seismograph invented by the Chinese astronomer, mathematician, and engineer Zhang Heng. Considering that this was in 132AD, it was an amazing accomplishment indeed and shows the high level of academic achievement in China at that time. My only criticism is that he compares the "earth" to a giant jigsaw puzzle. He was referring to the tectonic plates, which are part of the earth's surface and I think this could have been clearer. I also am not impressed with the "true and false" quiz at the end of each book, although some readers may enjoy them. This author is obviously a native English speaker and his books reflect that. I think that they would be particularly helpful for

an older child who is not a good reader but who is intelligent enough to be bored with the average low-level children's book. The information is on a level that is interesting even to an adult, but the writing should be comprehensible to a middle or high school kid who is a poor-to-average reader. It's difficult to present complex material in an easy-to-read format, and this is a good job.
