Web Design For Babies 2.0: Geeked Out Lift-the-Flap Edition

Synopsis

In this one-of-a-kind book, HTML, CSS, and JavaScript come to life to introduce basic code concepts to young children. With lift-the-flaps, bright colors, imaginative characters, and beautiful illustrations, children will be able to explore the interactive world of web design. Perfect for both the fun gift giver and the serious coder who wants to give their child or relative an early start on code concepts, it makes otherwise intimidating web design friendly and accessible through the story of three school friends who work together to become code superheroes.

John C. Vanden-Heuvel, Sr., is a web designer with more than 20 years of experience in publication design. He is the author of CSSÃ Â for Babies and HTML for Babies. He lives in New York City. Cristian Turdera is an illustrator and graphic designer who has illustrated more than 20 books, including CUCU and Rafa y Zoe, En el parque.

I didn't expect this book to actually teach coding to babies, but I guess the final product doesn't offer too much more than the basic joke in the title. I thought there could be a really basic story arc, at least, separate from the web design concepts. But there's no story, just three cute characters who present themselves, but don't make any big accomplishment. The layout, as well, is really cluttered.

Maybe they were limited by trying to fit all their ideas onto 12 pages, but there isn't really one clear thing to focus on for any given page.

I bought this and was disappointed. The book has misspelled words and words that are repeated. Plus, it's pretty boring. Not a sturdy board book and the flaps are flimsy. Not worth it.

This book is cute, not actually so appropriate for a young child but it gave the dad to be a good laugh.

I'm really disappointed in this book. This book isn't written for babies by any stretch of the imagination. The presentation of it in a board book is about as baby as it gets.I was hoping for a fun little book to share with my 1.5 year old (she loves lift the flap books), but other than looking at the colors, there's not much for a child her age. The content is written at maybe an 8-10 year old level, talking about specific css functions and html tags. I expected more like "this is a tag, it has brackets!" "these are colors!" etc.

I loved the idea of a web design book targeting babies age 2-5. I thought it was innovative so I ordered this book. When it arrived and I read it, I found that the language used is NOT for babies for example HTML is defined as the structure of a web page. Couldn't they define it in more simple words and maybe some analogies that a baby might understand?But hey, you can use it for nursery decoration or a photoshoot.. If you are planning to teach your baby anything, forget it with this book!

Super cute gift for any nerd in your life.

This book is really cute and I would absolutely recommend it for babies who have one or both parents working on websites. There are a couple of errors that ultimately don't matter but still bugged me because even though obviously my kid wouldn't know they were wrong, *I* knew.This is not a book I would leave alone with my baby - there are a lot of flaps that can be pulled up to look inside, which is cool and gives it an interactive element, but I worry about them being bent badly or being ripped off.Either way though it's a really cute book, great illustrations!

Awesome book, love reading it with my daughter. Its also an awesome gift, I've bought several for that purpose BUT there is a huge glaring typo.
