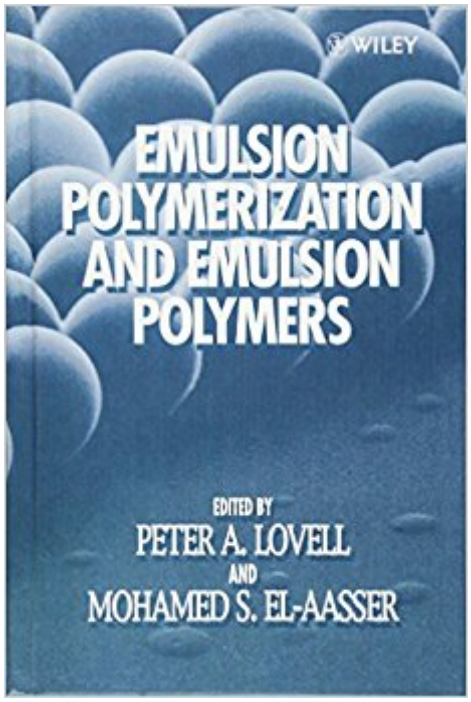
Emulsion Polymerization And Emulsion Polymers



Synopsis

Emulsion Polymerization and Emulsion Polymers Edited by Peter A. Lovell Manchester Materials Science Centre, UMIST, Manchester, UK and Mohamed S. El-Aasser Emulsion Polymers Institute and Department of Chemical Engineering, Lehigh University, Bethlehem, PA, USA Emulsion polymerization is a technologically and commercially important reaction used to produce synthetic polymers and latexes for a wide range of applications. It is the basis of a massive global industry that is expanding due to the versatility of the reaction and the greater realization of the ability to control properties of the polymer latexes produced. Emulsion Polymerization and Emulsion Polymers provides an up-to-date treatment of both academic and industrial aspects of the subject in a single self-contained volume. Established knowledge is integrated with latest developments and introductory chapters to give a state-of-the-art summary which is also suitable as a broad based introduction to the field. The individual chapters have been written by specialists from academia and industry and are presented in a way which ensures that the book will be of equal value to experienced researchers and students.

Book Information

Hardcover: 826 pages
Publisher: Wiley; 1 edition (March 1997)
Language: English
ISBN-10: 0471967467
ISBN-13: 978-0471967460
Product Dimensions: 6.5 x 2.1 x 9.4 inches
Shipping Weight: 2.9 pounds (View shipping rates and policies)

Customer Reviews

This book provides an up-to-date treatment of academic and industrial aspects of emulsion polmerisation in a single, self-contained volume and will integrate established knowledge with the latest developments. No other book, or combination of books currently provides this information in a form which gives a state-of-the-art summary that is also suitable as a broadly-based introduction to

the field.

Emulsion polymerization is a technologically and commercially important reaction used to produce synthetic polymers and latexes for a wide range of applications. It is the basis of a massive global industry that is expanding due to the versatility of the reaction and the greater realization of the ability to control properties of the polymer latexes produced. Emulsion Polymerization and Emulsion Polymers provides an up-to-date treatment of both academic and industrial aspects of the subject in a single self-contained volume. Established knowledge is integrated with latest developments and introductory chapters to give a state-of-the-art summary which is also suitable as a broad based introduction to the field. The individual chapters have been written by specialists from academia and industry and are presented in a way which ensures that the book will be of equal value to experienced researchers and students.
