Is Anybody Out There?: An Expanded Excerpt From Our Cosmic Story (OCS Book 2)

Synopsis

"This is a great read... Mathew was able to distill an enormous amount of information to tell "our cosmic story" and give an overview that is engaging and easy to read. Buying this book is a no-brainer. - Reviewer of Our Cosmic Story

Is Anybody Out There? is an expanded excerpt of Chapter 9 from the complete book, Our Cosmic Story. This excerpt is the climax of what is brought forward in the book on the chance of life and civilizations to exist elsewhere in the Universe. If you are not able to read the entirety of Our Cosmic Story, this excerpt will give you the end-result of what we talk about: Is anybody out there?

Chapter Overview: Introduction Is Anybody Out There? The Drake Equation Detecting Another Civilization The Fermi Paradox The Great Filter New Equations Are Needed Summary: A Lonely Pale Blue Dot

More about Our Cosmic Story: Our Cosmic Story is a big picture view of our Universe and the potential it has for life and civilization. We start by looking back at the story of Earth and its great civilizations, understand how life itself evolved Homo sapiens, review the challenges and risks that a species entails in developing a civilization and growing into a space-fairing entity, and then explore the makeup of the Universe to gain insight into the chance of other sentient creatures living elsewhere. The quest to reach beyond the confines of our world is a natural consequence of being a very small part of a grand and dynamic Universe. Looking up at the sky instills within us some expectation that we are not alone, and we wonder if there is not something amazing happening out there somewhere. This sense of awe may not be exclusive to Earthlings; for in a galaxy truly far away, there could be creatures with similar musings as they peer towards our corner of the Universe. The idea that we share a common experience with others in the cosmos is something to keep in mind while reading this book.

Customer Reviews

This was very interesting. Given all the possibilities in this book of the possible civilizations out there it makes you wonder..

Fun read and thought exercise. There is nobody out there, effectively. Size time and speed preclude our ever meeting ET The light house effect eliminates our ever hearing the alien I Love Lucy but fun to imagine.

This reviews the concepts of searching for other intelligent life in the Universe in a interesting and enjoyable way. No fantasy predictions , Just the methods and results. I recommend it for late night reading.

Great book with most of I ever thought about the subject. The update of Drake equation was very clever. Congratulation to Mathew Anderson. Paulo Fernando Veiga do Amaral - Rio Brasil

This additional chapter not only dives into the age long argument of why we are not alone in the universe but does it so through scientific proofs and grabs your attention through popular pop culture reference which makes it easy to read and opens your mind to what could and might be.

I love reading up on topics such as these. Fascinating subject.

A wonderfully crafted book that oozes creativity and wonder. A must read!
